

## Tolling Information

### How will tolls be collected?

- Full electronic toll collection (no booths or toll plaza)
- All users tolled except transit and vanpools
- Users will have transponders (“cards”)
- Offenders may receive bill in mail
- Electronic “card readers” operate at high-speed
- “Card reader” likely on new bridge

### Transponder Technology

Electronic toll collection uses transponders to identify a vehicle and then assess a toll. Below are two types of transponders that could be used with electronic toll collection on SR 520.

This transponder permanently attaches to a vehicle’s windshield. In many places, they are sold at kiosks that resemble ATM machines. In the future, they may be available at actual ATM’s.

This transponder is portable. It can potentially be transferred between multiple vehicles.
